

A world map illustrating the global distribution of the 'B' language family. The map uses a color scale where darker shades of red and orange indicate higher concentrations or specific subgroups, while lighter shades indicate more widespread or less concentrated areas. The highest concentrations are found in South America (primarily Brazil and Colombia), Central America, and parts of Africa (notably the Sahel region). Significant concentrations also appear in Southeast Asia (Thailand, Laos, Cambodia, Vietnam) and parts of the Middle East and Central Asia. The map shows a broad distribution across the Americas, Europe, and Africa, with varying intensities of the red/orange color.
